

CORPORATE OVERVIEW

Vomaris Innovations, Inc.

Vomaris Innovations, Inc. (www.vomaris.com) is a privately-held medical device company specializing in bioelectric technology that is redefining infection control and wound healing. Vomaris's patented Procellera with V.Dox™ Technology powers antimicrobial products for the wound and incisional care markets and has been validated in 29 peer-reviewed publications to date.

The Company was founded in 2004 and is based in Tempe, Arizona. Vomaris products are registered and actively commercialized in nine countries around the world. More than one million wounds have been treated with the Company's technology.

Technology

V.Dox Technology is a proprietary pattern of microcell batteries embedded in fabric that wirelessly generate electricity in the presence of moisture. Studies have shown that application of an external electric field (such as those generated by V.Dox Technology) can have an anti-inflammatory effect by altering cellular pathways responsible for inflammation. Studies have also shown that V.Dox Technology kills a broad spectrum of microbes, including multidrug-resistant and biofilm-forming bacteria, and accelerates cell migration (which is required for healing).

Fig. 1: Procellera™ Antimicrobial Wound Dressing powered by V.Dox™ Technology

The Vomaris family of antimicrobial wound dressings are powered by V.Dox Technology. These electroceutical dressings generate electricity that is designed to mimic the electrical energy skin naturally creates and uses to heal itself.

Vomaris's bioelectric dressings are FDA-cleared and commercially available for both prescription and over-the-counter use under the brand names Procellera™ and JumpStart® Antimicrobial Wound Dressings, powered by V.Dox Technology. They are used in clinical settings for partial and full-thickness wounds such as surgical incisions, pressure ulcers, venous ulcers, diabetic ulcers, first and second-degree burns, and donor and recipient graft sites.

Management Team

Vomaris's management team is comprised of accomplished medical device industry executives, including:

- *Michael Nagel, President and CEO.* 30+ years of sales and marketing experience in medical devices. Previous positions include Chief Commercial Officer at Neomend (acquired by C.R. Bard) and Co-Founder and Vice President of Worldwide Sales and Marketing at Vascular Solutions (VASC) (acquired by Teleflex).
- *Mary Maijer, Chief Commercial Officer.* 30+ years experience in health care, including medical device development, global branding and commercialization. Previous positions included Vice President of Marketing at Covidien (acquired by Medtronic) and Vice President of Global Marketing Operations at St. Jude Medical (acquired by Abbott).
- *Michel Tanguay, Chief Financial Officer and Head of Operations.* 15 years of experience in medical devices and in-vitro diagnostics. Previous experience in senior financial roles in manufacturing and renewable energy industries.
